Second Term English Test 2

COMPUTER

Computer is a device that transforms data into meaningful information. Data can be anything like marks obtained by you in various subjects. It can also be name, age, weight, height, etc. of all the students in a class.

Computer is composed of hardware and software. The term hardware refers to the physical components such as the system unit, keyboard, mouse, monitor etc. The software refers to instructions that run the computer. The computer performs basically five major operations of functions : it accepts data or instruction by way of input, it stores data, it can process data as required by the user, it gives results in the form of output, and it controls all operations inside a computer.

Part One :
